Notes on *lipu pu*

Seven years have passed since the first official book was published. As Toki Pona is a living language, *Toki Pona: The Language of Good* must also be a living document. Let me share some clarifications, corrections and critiques.

p. 7

“This is the way I use Toki Pona.” The first book serves as a snapshot and reference point of one key person’s way of using Toki Pona at one key moment in time. This foundation is paired with the invitation on page 62. “Now the rest depends on you. Go enjoy yourself. Create, play, and be *pona!*”

p. 11

In light of a commitment to non-ableist language, the chicken example should be corrected to ‘silly bird’ (*waso nasa*).

p. 17

In the book, words are taught using parts of speech and example translations that are familiar to English-speaking learners, e.g. nouns, adjectives, verbs. A deeper analysis of Toki Pona grammar reveals that a model with content words and particles (among others) may be more appropriate or

accurate. For one example, search for “Toki Pona Analysis: Parts of Speech” by u/pisceyo (kala kala) on Reddit.

p. 23

The word *mi* is introduced as meaning *I, me, we*. I would like to emphasize that singularity is not the default in Toki Pona.

p. 23

At this point, *meli* and *mije* have been taught. A third word, *tonsi*, has been created by the community of Toki Pona speakers in a grassroots project, and I support it. See the dictionary part of this book for definitions.

p. 25–27

While *kute* does also mean obey, other perception words like *lukin* can also be used for obeying, for example if the information was conveyed visually.

p. 28

Technically, the word *pu* describes the relationship and interaction between a person (*jan pu*) and the book (*lipu pu*). In informal usage, a number of people use *pu* as a name for the book itself or the variety of Toki Pona presented in it.

p. 31–33

A few people form a yes-or-no question using intonation alone, without adding *anu seme* or using the *ala* method. Although this can occur spontaneously in some situations, I

would not recommend it as the main way to form a yes-or-no question, especially in writing.

In addition to the verb repetition method to answer ‘yes’, it is also very common to hear ‘lon’ with the meaning of ‘yes, that’s true’.

p. 34

In early years, *kepeken* served as both a preposition (without *e*) and as a transitive verb (with *e*). Later, an effort was made to consolidate *kepeken* as only a preposition, i.e. without *e*. Today, some people use *kepeken e*, although the majority use *kepeken* only as a preposition. There may be benefits to either style.

Preposition style:

o kepeken ala ilo ike. or *o kepeken ilo ike ala.*

Transitive verb style:

o kepeken ala e ilo ike. or *o kepeken e ilo ike ala.*

Many people also use prepositions as nouns. For example:

mi sona ala e tan. I don’t know the reason.

mi toki e lon. I say the truth.

p. 35

I personally use the preposition *lon* with a very wide meaning. The example *mi toki lon toki pona* could also be expressed as *mi toki kepeken toki pona*, and many Toki Pona

speakers prefer this way. I also personally use *lon* when talking 'about' something: *mi toki lon kili*. I'm talking about turnips.

p. 38

For 'Chinese lady' (*meli Sonko*), many people find it clearer to say *meli pi ma Sonko* or *meli tan ma Sonko* or *meli pi kulupu Sonko*. This avoids misunderstanding it as 'a woman named Sonko', because the primary interpretation of '[noun] [Name]' is 'a [noun] named [Name]'.

p. 38

Correction: *jan Epawan Linkan li tan ma Mewika*.

p. 43–45

Although the particle *pi* is glossed as 'of', it is more accurate to say that *pi* regroups modifiers. As the examples in *lipu pu* show, it does not behave exactly the same way as the English word 'of'. It may be helpful to compare the function of *pi* to the hyphen in English. For example, compare:

<i>pali jan wan</i>	one personal project
<i>pali pi jan wan</i>	one-person project
<i>waso kule tu</i>	two colourful birds
<i>waso pi kule tu</i>	two-coloured bird

Also, a completely different way to use *pi* exists in the structure *A pi B en C*. This is a very old way to use *pi*, which

continues to be used by some people; however, many people dislike using it. For example, *linja pi ma en sewi* is one way to say horizon, and *musi pi kiwen walo en kiwen pimeja* is one way to say chess.

p. 45

The proverbial scholar of Toki Pona also listens to the usage of the community.

p. 46–47

For those who yearn for a more sophisticated and robust number system, I personally endorse the *kijetesantakalu*-based system, innovated by soweli nata in alignment with the values system of Toki Pona. See near the end of this book.

p. 48–50

Other examples of pre-verbs in usage include *alasa*, *open*, *pini* and *tawa*:

<i>o alasa lukin e lipu.</i>	Try to read the document.
<i>mi open seli e pan.</i>	I started cooking rice.
<i>sina pini moku e kili.</i>	You finished eating the kumquat.
<i>mi tawa moku e kala.</i>	I'll go eat seafood.

p. 52

In my opinion, whether to use a comma before *la*, after *la*, or to not use a comma at all is a personal stylistic choice.

p. 54

The *pu* book introduces an oddity with how *noka* has traditionally been used. It is much more common to use *noka* as ‘leg, foot’ and *anpa* as ‘area below or under’.

p. 56

In *pu* style, the particle *li* can introduce a new verb for a third person subject, but in the case of *mi* or *sina*, one starts a new sentence. This reflects *li*’s origins as a third person marker. Many people have expanded the use of *li* to introduce a new verb, even when the subject is *mi* or *sina*.

pu style:

<i>jan li toki li moku.</i>	The person speaks and eats.
<i>mi toki. mi moku.</i>	I speak and eat.

Expanded *li* style:

<i>jan li toki li moku.</i>	The person speaks and eats.
<i>mi toki li moku.</i>	I speak and eat.

p. 58

jan Melani li kama tawa tomo mi.

We can also say:

jan Melani li kama lon tomo mi.

p. 62

This page contains by far the most important message in *lipu pu*.

p. 65

Correction: 2. *kulupu pi toki pona li pana e ijo mute.*

p. 73

Non-ableist language: A sage is a strange person.

p. 76

Non-ableist language: Women will make men impulsive.
(Of course, not all men experience opposite-sex attraction in this way.)

p. 92–103

Signed Toki Pona (*toki pona luka*) was presented as a game to battle Lojbanists. A new and very *pona* project, *luka pona*, has since been designed by jan Olipija to be usable as a naturalistic sign language alongside Toki Pona. I recommend learning *luka pona*.

p. 104–111

The community has developed *sitelen pona* glyphs for many non-*pu* words. For example, two great font projects include *linja sike* by lipamanka and *linja suwi* by jan Ana.

An alternate and secular form of the *sewi* glyph also exists as an option. It matches the other spatial terms like *anpa*.
For example, search for “sitelen pona la sitelen ante mi pi nimi sewi” by u/neonpixii on Reddit.

p. 112–123

These were presented as suggestions and still serve as useful defaults to fall back on. If the community of Toki Pona speakers, especially those with a connection to the place or language in question, agree on a way they would prefer to be called in Toki Pona, please use that form. In Toki Pona, there is a preference for endonyms. Also there is an effort to re-use the same word for the country, the language and the ethnic group. See *nimi.tokipona.org*

p. 116

Is the example of *ma Sawusi* an error or an indication that Toki Pona phonotactics are less strict when transcribing foreign words?

p. 125–134

In an effort to minimize the vocabulary for learners, some words were presented as merged: *a* and *kin*, *sin* and *namako*, *lukin* and *oko*. In reality, the community of Toki Pona speakers, both before and after publication of the first book, uses these words with different meanings. See the dictionary part of this book for definitions.

akesi li suwi!

p. 125

Correction:

akesi

NOUN reptile, amphibian

p. 130

Non-ableist language:

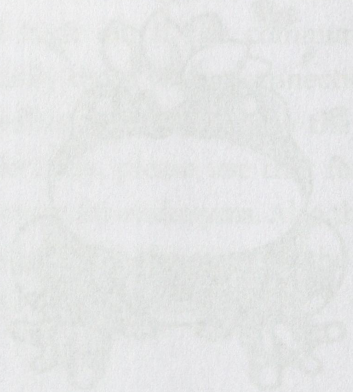

nasa

ADJ unusual, strange; silly; drunk, intoxicated

p. 131

The examples given for *seli* are in fact nouns.

About the Dictionary

tengo to a lon al

The Toki Pona Dictionary project documents common ways Toki Pona speakers translate common English words. It is based on four months of community polling in the *toki pona* Discord server.

Toki Pona Dictionary

The *toki pona* Discord server is the social hub with the most people. It is a place where people can talk to each other and share their ideas. The *toki pona* Dictionary is a project that aims to document common ways Toki Pona speakers translate common English words. It is based on four months of community polling in the *toki pona* Discord server.

When collecting terminology, I was not able to include every single suggestion. I was not able to include every single suggestion. I was not able to include every single suggestion. I was not able to include every single suggestion. I was not able to include every single suggestion. I was not able to include every single suggestion.

About the Dictionary

tenpo ku li lon a!

The *Toki Pona Dictionary* project documents common ways Toki Pona speakers translate common English words. It is based on four months of community polling in the *ma pona pi toki pona* Discord server.

The *ma pona pi toki pona* community was chosen for this one project, because at the time it was the social hub with the most linguistic vitality and the highest number of volunteers available in real time. Because the data was sourced from one particular community only, this dictionary inherits whatever linguistic patterns, cultural or personal values, views and biases that are predominant in that community.

When collecting terminological data from volunteer informants, I was not able to include every single answer suggested, but I did my best to include the most common ways and the ways that made sense to me. If your favourite neologism (*nimi sin*) or creative phrasing was not included in this book, please accept my apologies.

Warning Against Lexicalization!

The translations in this dictionary are by no means the only correct ways to say things. In fact, the whole point of Toki Pona is to meditate about what things mean to you personally, paying attention to the unique context around them, and to construct your own phrases using the building blocks provided by Toki Pona. Don't think of the translations listed in this dictionary as *the* answers, but rather as **common options or examples** to inspire or guide you.

In the words of jan Likipi, "There are no hard-set compound phrases in Toki Pona. This is by design! Part of the goal of the language is for you to break down your surroundings from your own viewpoint and describe things dynamically, not use the same phrase to mean the same thing all the time. Think about what the topic means to you, and consider what is important about it."

A useful habit when using any bilingual dictionary is to compare your ideas with their back-translation from the other side of the book. For example, you look up an English word and see three suggestions in Toki Pona. You can then look up each of those in the Toki Pona side to see what other things they commonly mean or don't mean, and better understand how they differ.

Grammar

Also note that a dictionary doesn't always teach grammar. A dictionary points you to which words you might want to use, but it doesn't teach you how to integrate them into a sentence. For example, you might look up 'beside' and see the translation *poka*. To build a Toki Pona sentence using the word *poka*, you still need to know whether and how to add *lon*. Often, the syntax and word order in Toki Pona are very different from English. An obvious case of this is the particle *la*. Similarly, the important particles *li* and *e* do not have exact English equivalents and are not taught in this book. The first official book, *Toki Pona: The Language of Good*, teaches the fundamentals of Toki Pona grammar.

That being said, *ku* does confirm some aspects of Toki Pona grammar not mentioned by *pu*. For example, *jan kepeken* shows *kepeken* as a content word. There are several entries that use multiple *pi*'s in the same noun phrase. Many entries show a prepositional phrase at the end of a noun phrase, e.g. *jan lon soweli* (rider). We can observe interesting stylistic trends such as *tenpo* dropping. And so on.

About Endonyms

In Toki Pona, there is a preference to use self-designated names (endonyms) for the proper names of ethnic groups, countries, cities, languages, religions, famous people, etc.

The data in this dictionary was gathered from people who may not have been aware of actual endonyms. If the community of Toki Pona speakers with a cultural connection to a specific proper name agree on an endonym they would prefer, please use that form. See nimi.tokipona.org

What do the little numbers mean?

The superscript numbers are frequency indexes that measure how commonly a word was used by the Toki Pona speakers surveyed during the research project. It is a scale from $\frac{1}{2}$ to 5. For example, 5 shows a widespread translation that the overwhelming majority of informants independently agreed on. In contrast, $\frac{1}{2}$ often shows an expression that is unique to one person, yet was still accepted as valid and understandable. A more common translation is not necessarily more correct. However, there are many situations where it's helpful to know roughly how common or uncommon a word or translation is.

More specifically, the frequency index means that, when a group of 10 to 30 informants were asked how they would say a specific English word or phrase in Toki Pona, the following percentage of them gave that answer:

frequency index	percentage of respondents
5	81 to 100%
4	61 to 80%
3	41 to 60%
2	21 to 40%
1	11 to 20%
$\frac{1}{2}$	1 to 10%

Although the indexes were generated while surveying people to translate prompts from English to Toki Pona, the values are preserved when the data is reversed and presented as Toki Pona to English translations.

What about the new *ku* words?

This dictionary documents Toki Pona as a living language. As a result, it also includes a specific set of non-*pu* words, which can now be called *ku* words.

When choosing whether a particular *ku* word is one you want to use, its frequency index can help show its approximate vitality and importance at the moment when this dictionary was compiled.

Word choice also depends on your personal style and goals. For example, if you enjoy the original minimalism ethos and challenge of Toki Pona, you may want to restrict your vocabulary as much as possible. If you enjoy the *nimi sin* ethos and organically growing culture, you can now more confidently use the most common non-*pu* words, knowing they are published *ku* words.

nimi ku sulì

I would argue that almost all new words with a frequency index of 3 or higher are now an essential part of Toki Pona. We can call them *nimi ku sulì*:

namako, kin, oko, kipisi, leko, monsuta, tonsi, jasima, kijetesantakalu, soko, meso, epiku, kokosila, lanpan, n, misikeke

Personally, when I evaluate new *ku* words with a frequency index of 2 or lower — if I may call them *nimi ku pi sulì ala* — some of them give me the reaction, ‘OK, I understand this word, but do we really need it?’ Others give me the reaction, ‘This word has excellent expressive power. Let’s use this creatively in more situations!’

The new *ku* words are of various types. Some were taken from my old pre-*pu* drafts. Many others were created by members of the Toki Pona community. Some are pragmatic and fill semantic gaps. Others are clearly part of the humour tradition of Toki Pona. Some could be described as technical terms used by specialists who frequently deal with a topic and need a dedicated word. Many *nimi sin* are slang, and the nature of slang is to change quickly.

Experiment and decide your style of Toki Pona for yourself. I encourage freedom and creativity!

nasin nanpa kijetesantakalu uli

tan soweli nata

After a lot of deliberation, I have finally come up with my very own *nasin nanpa* that I believe stays true to the philosophy of Toki Pona.

Like some others, it uses base-6, with the most significant digit spoken first. Unlike some others, it allocates a few extra words for this. The words are pronounced similarly to the existing word *kijetesantakalu*, but the stress is placed differently.

The digit 5 is represented with the second syllable stressed, the digit 4 is represented with the third syllable stressed, and so on, up to 0, with the last syllable stressed. Do not be deceived; these are still different words!

Stress is not marked in written form.

Example:

mi wile e kili kijetesantakalu kijetesantakalu.

I would like thirty apples.
